IntelliReq

NLP-Based Software Requirements Analysis System

Total Requirements: 5

Average Quality Score: 96.0/100

High Risk Requirements: 2

Contradictions: 2

REQ-001 - Functional

Requirement: The system shall allow users to change their password.

BERT Confidence: 99.37%

Quality: 100/100

Priority: Critical

Risk: High

Security: Yes

Completeness: Complete

Ambiguous Words: None

AI Rewritten: The system shall allow users to change their password.

REQ-002 - Functional

Requirement: The system shall not allow users to change their password.

BERT Confidence: 98.74%

Quality: 100/100

Priority: Critical

Risk: High

Security: Yes

Completeness: Complete

Ambiguous Words: None

AI Rewritten: The system shall not allow users to change their password.

REQ-003 - Functional

Requirement: The system shall allow users to login using a username and password.

BERT Confidence: 98.7%

Quality: 100/100

Priority: High

Risk: Low

Security: Yes

Completeness: Complete

Ambiguous Words: None

AI Rewritten: The system shall allow users to login using a username and password.

REQ-004 - Security

Requirement: The system shall encrypt user passwords.

BERT Confidence: 99.51%

Quality: 100/100

Priority: High

Risk: Low

Security: Yes

Completeness: Complete

Ambiguous Words: None

AI Rewritten: The system shall encrypt user passwords.

REQ-005 - Usability

Requirement: The system should be easy to use.

BERT Confidence: 99.35%

Quality: 80/100

Priority: Medium

Risk: Low

Security: No

Completeness: Complete

Ambiguous Words: easy

AI Rewritten: The system shall allow users to complete the task within 2 minutes without assistance.
